

NAME:

Measuring Use Augmented Reality and Reality

Find 10 items to measure. Be creative! You can choose any items you want. (However, if you're just using a ruler, you might not want to pick anything too big.)

Record the description of the items you chose. Measure the length of the item with the app. Then, measure the same item again using a ruler or tape measure. Compare the two measurements. Are they same or different? If there is a big difference, try measuring again. If it's a little difference, how much is it different by? Make sure you record all your information.

Item	App Measurement	Ruler/Tape Measurement	Were they the same?	If no, what was the difference?	Any change when you remeasured?
